UX DESIGN CASE STUDY

Movie Ticket Booking User Journey Map

An end-to-end blueprint mapping user behaviors, emotional curves, pain points, and product opportunities in mobile ticketing.

Project Overview & Goals

The Objective

Understand the end-to-end experience of moviegoers using a mobile application to book cinema tickets, select seats, add concessions, and enter the theater seamlessly.

By mapping each interaction, product teams can identify friction points, reduce drop-off rates, and enhance post-booking retention.

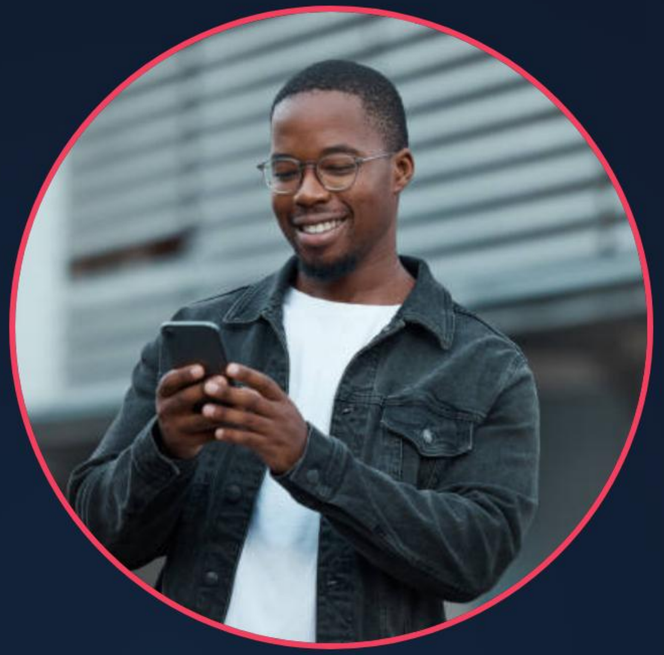

Key UX Goals

1. Fast Selection: Enable users to find showtimes and pick seats in under 3 minutes.

2. Frictionless Checkout: Eliminate payment hurdles and hidden fees during checkout.

3. Contactless Entry: Provide instant M-ticket access for effortless theater check-in.

User Persona: Alex, 28

Alex Chen (Tech Consultant)

Alex loves watching newly released blockbuster movies on weekends with friends. He values speed, clear seat availability visuals, and quick digital checkout without long theater lines.

Goals: Find preferred reclining seats quickly, compare nearby theater showtimes, and get digital QR passes for fast scanning.

Frustrations: Timed seat selection timeouts, unexpected convenience fees at checkout, and slow app loading on mobile data.

Tech Savvy | Frequent Moviegoer | Prefers Mobile Wallet

5 Core Journey Stages

1. Discovery

Searching for trending movies, watching trailers, checking ratings, and picking nearby theaters.

2. Selection

Selecting showtimes, picking optimal seats on an interactive layout, and adding snacks.

3. Checkout

Applying promos, entering payment details, and confirming the ticket order.

4. Arrival

Navigating to theater, presenting digital QR M-Ticket at gate, and grabbing concessions.

5. Retention

Rating the film, sharing feedback, earning loyalty points, and saving upcoming titles.

Stage 1: Discovery & Search

User Actions & Touchpoints

Action: Alex opens the app on Friday evening to find movies playing nearby.

Touchpoints: Homepage banner, movie cards, IMDb/Rotten Tomatoes ratings, HD trailer pop-up.

Pain Points: Cluttered home screen, intrusive pop-up ads, and inability to filter by IMAX/4DX formats quickly.

UX Opportunity: Smart location-based default theater suggestions and instant genre filter pills.

Stage 2: Seat Selection

Customizing the Cinema Experience

Alex selects the 7:15 PM IMAX showtime and enters the seat selection grid. He picks two center recliner seats and adds a popcorn combo.

Friction Point: Unclear seat screen direction and strict 5-minute checkout countdown timer triggering stress.

Opportunity: Real-time screen angle view previews and 1-tap snack bundle add-ons.

Stage 3: Checkout Experience

Step	User Action	Pain Points / Friction	UX Solution
Review Order	Checks ticket summary & seat numbers	Surprise convenience fees added at last step	Transparent price breakdown upfront
Apply Offers	Searches for promo codes / credit card deals	Invalid code errors without helpful reasons	Auto-apply best eligible promo code
Payment	Selects Apple Pay / Credit Card / UPI	Complex OTP verification causing timeout	Biometric 1-click payment integration
Confirmation	Receives booking confirmation screen	Delayed SMS / email ticket confirmation	Instant push notification + Wallet pass

Stage 4: Cinema Arrival & Entry

85%

Faster Gate Entry

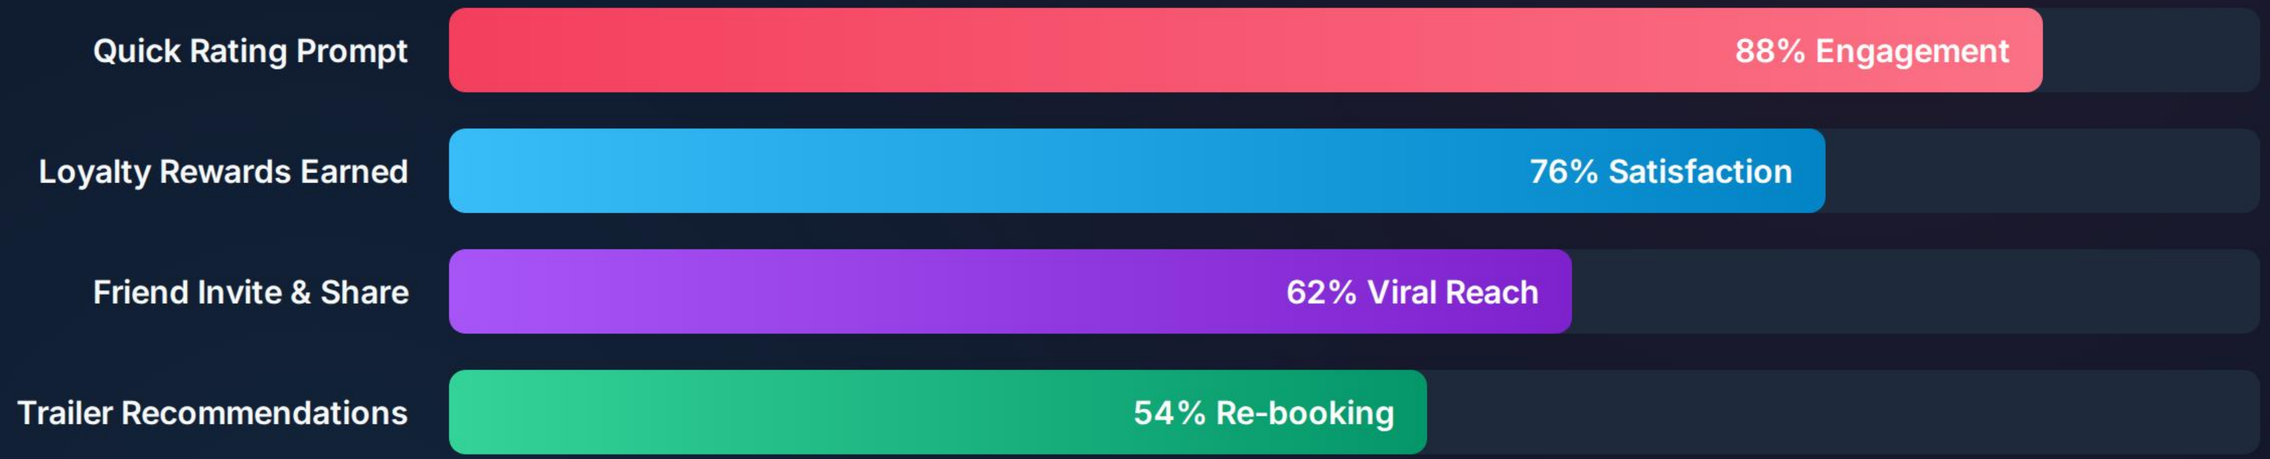

Digital QR Code M-Ticket

Upon arriving at the theater, Alex bypasses the box office ticket counter and heads straight to the auditoriums.

Touchpoints: Apple Wallet / Google Pay pass, offline QR code, push notification reminder 30 minutes before showtime.

UX Delighter: Automatic screen brightness boost when opening the ticket QR code for seamless usher scanning.

Stage 5: Post-Movie Retention

Post-show engagement features drive long-term app retention and turn single-ticket buyers into regular subscribers.

Emotional Journey Curve

User sentiment peaks during seamless QR gate scan (+1.0) and dips heavily at checkout fee reveal (-0.6).

Key Recommendations

- **Upfront Price Transparency:** Display total price including convenience fees earlier to avoid checkout abandoned carts.
- **Express 1-Tap Booking:** Save favorite cinema locations and payment options for 30-second rapid ticket purchases.
- **Offline M-Ticket Mode:** Ensure QR code tickets are automatically stored locally on the device to handle poor theater basement cellular signals.
- **In-Seat Food Delivery:** Expand F&B ordering to allow delivery directly to recliner seats during intermission.

Questions & Discussion

Thank you for exploring the Movie Ticket App User Journey Map.
